WIND

RAIN

TORNADO

METEOR

STORM

SUN

MICROBURST

The Earth orbits this star, which radiates heat and light. It rises in the morning and sets in the evening.

A change in the atmosphere that can be characterized by heavy rainfall, lightning, snow, or hail.

A short, localized downdraft that creates extreme wind and is typically associated with thunderstorms.

The movement of air at any speed.

A destructive, whirling wind accompanied by a funnel-shaped cloud that progresses in a path over land.

Rocks from space that enter the Earth's atmosphere and look like shooting stars.

Water falling in drops from vapor that condenses in the sky.
